# About the Firm

Dimensional is a global investment firm that has been serving investors for more than 35 years

- Dimensional offers investment solutions across asset classes, including global equities, fixed income, and REITs.
- We manage \$518 billion for investors worldwide.

**With offices positioned around the world, we manage portfolios across time zones and provide responsive service to our clients.**

# A Different Approach to Investing

A strong belief in markets frees us to think differently about investing

## WHERE DO RETURNS COME FROM?

### Dimensional's View

The market drives returns, and portfolio structure and implementation determine performance.

### Conventional Manager's View

Performance comes from identifying "mispriced" securities or accurately predicting economic and market conditions.

### Index Manager's View

Commercial indices attempt to represent asset class returns, requiring index funds to follow the portfolio construction and rebalancing decisions of the index provider.

At Dimensional, we believe the best way to invest is to identify differences in expected returns and balance the tradeoffs among competing premiums, diversification, and costs.

Our consistent philosophy has guided the investment solutions we have offered clients since our founding.

# Putting Research into Practice

Dimensional identifies compelling research and applies it to practical investing

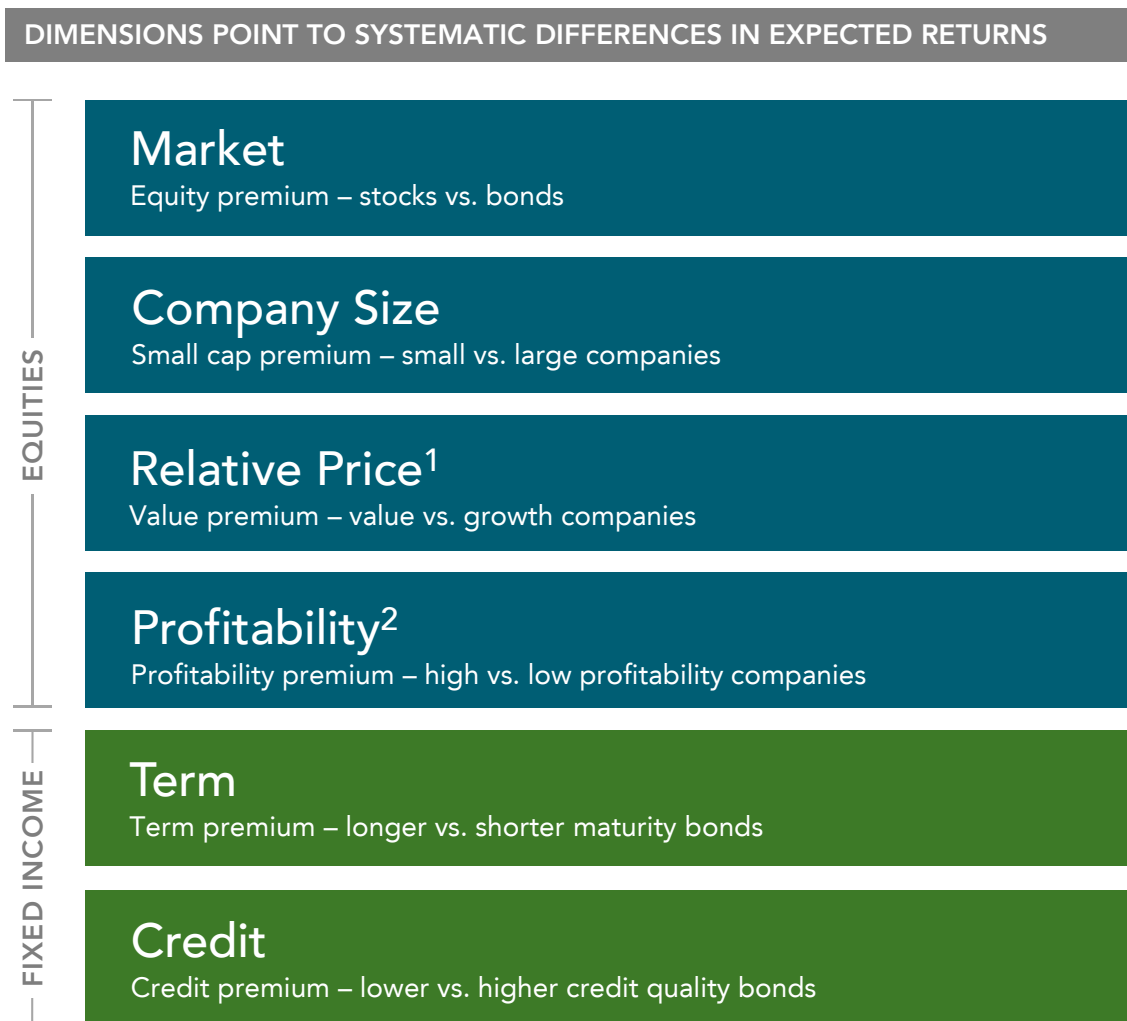

- Many of the greatest advancements in finance have come from the academic community.
- Dimensional works closely with leading financial academics to identify new ideas and research that may benefit investors.

**Advancements in research and technology inform our investment strategies and keep us responsive to evolving markets and client needs.**

# A Clear View of Expected Returns

Decades of research and rigorous testing underpin our approach

Portfolios can be structured around these dimensions, which are sensible, backed by data, and cost-effective to capture in diversified portfolios.

Backed by years of research, we identify and pursue these dimensions for investors.

Diversification does not eliminate the risk of market loss.

1. Relative price as measured by the price-to-book ratio; value stocks are those with lower price-to-book ratios.

2. Profitability is a measure of current profitability, based on information from individual companies' income statements.

# A Dynamic Investment Process

Our goal is to add value over benchmarks and peers through a robust process

- Using information in market prices throughout the process, Dimensional carefully structures and implements portfolios to target higher expected returns.
- Our integrated, flexible approach considers the interactions among premiums, market frictions, costs, and diversification.

**We want our clients to fully understand our process so they can see how it applies to their goals.**
